**Safety** begins with us

**Medsafe** was founded in 1979 and started operations in Marshall, TX.

Since 2011, **Medsafe** has operated out of a 100,000 square foot corporate headquarters and distribution hub located in La Porte, TX.

**Medsafe** operates multiple locations and serves customers across the continental US and abroad.

**Medsafe** has been partnered with **Reliance Fall Protection** for over 16 years. That relationship enables us to respond quickly and effectively to any fall protection issues that may arise with our customers.

Horizontal lifelines are a common requirement for infrastructure work, most often on road and bridge projects. **Reliance** has become an integral player in providing comprehensive solutions to fall protection challenges that are unique to this environment.

See the following page for more information about **Reliance Fall Protection's** Horizontal Lifeline solutions for road and bridge work. To speak to a representative about your Horizontal Lifeline needs, call us today at 800.330.9240. We look forward to finding the solution that's right for you.

**Reliance** offers a variety of engineered horizontal lifeline systems that are specifically designed to address the fall protection hazards associated with the construction and maintenance of roadways and bridges. These systems use components that were developed to meet the standard requirements of road and bridge work environments, and have been thoroughly field tested on actual jobsites.

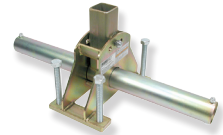

**Reliance** Horizontal Lifeline Systems for Road and Bridge work share a common horizontal lifeline element, but use different anchor, stanchion, and other elements specific to the environment in which they are installed.

## Reliance Horizontal Lifeline Systems for Road & Bridge

Below are four of the stanchion bases most commonly used in Road & Bridge construction scenarios. Contact Medsafe for more information about building a complete system.

### Looped Rebar System

Stanchions attach to rebar loops in concrete bridge beams. Loop dimensions are 2-1/2" min ID and 9" (6.3/22.8 cm) max height. Use #4 rebar, minimum half inch, grade 40 or 60.

Looped Rebar Stanchion Base

### Nelson Stud System

Receiver and tie-back brackets are designed to clamp directly to Nelson Studs. Brackets are designed to allow enough space on beams to allow decking panels to be flown in to place without interference from brackets.

Nelson Stud Stanchion Base

### Structural Steel for Bridge Beams System

Designed to clamp to existing beams without modification or welding. Most beams can be accommodated with the clamp shown here.

### Pour-In-Place Concrete Insert System

PVC Sleeves may be poured in place in the beams, end caps or other support structure. Sleeve is set 12" (30cm) into concrete.
